TEST CASES:

ID	Module	Function	Description	Input / Condition	Expected Result
TC01	Customers	registerCustomer	Register valid customer	Correct name, phone, email, address	Customer is created with assigned ID
TC02	Customers	registerCustomer	Register customer with invalid phone	Phone with letters	Registration error message
TC03	Customers	listAllCustomers	List customers when empty	No customers in database	Message: "No customers registered"
TC04	Customers	findCustomerById	Search customer by valid ID	Existing ID	Customer data is displayed
TC05	Customers	findCustomerById	Search customer by invalid ID	Non-existing ID	Customer not found
TC06	Customers	deleteCustomer	Delete existing customer	Valid customer ID	Customer deleted successfully

TC07	Events	addEventToCustomer	Add event to customer	Valid customer + valid event data	Event created with ID and final price
TC08	Events	addEventToCustomer	Add event with invalid type	Type outside 1–4	Error: Invalid event type
TC09	Events	viewCustomerEvents	View customer events	Customer with registered events	List of events is displayed
TC10	Events	deleteEvent	Delete existing event	Valid event ID	Event deleted successfully
TC11	Bills	createBill	Create a valid bill	Customer with at least one event	Bill created with PENDING status
TC12	Bills	createBill	Create bill without events	Customer without events	Error message shown
TC13	Bills	markBillAsPaid	Mark bill as paid	Valid bill ID	Bill status updated to PAID
TC14	Bills	findBillById	Find non-existing bill	Invalid bill ID	Bill not found
TC15	Bills	deleteBill	Delete existing bill	Valid bill ID	Bill deleted successfully
TC16	Photographers	registerPhotographer	Register photographer with invalid name	Name with numbers or symbols	Validation error message
TC17	Photographers	registerPhotographer	Register photographer without events	No events registered	Registration blocked
TC18	Photographers	findPhotographerById	Find photographer by ID	Valid photographer ID	Photographer information displayed

TC19	Photographers	deletePhotographer	Delete photographer	Valid photographer ID	Photographer deleted successfully
TC20	Equipment	registerEquipment	Register equipment without name	Name field empty	Error message: "Name is required"
TC21	Equipment	updateEquipmentStatus	Update equipment status	Option 3 (Maintenance)	Equipment status updated to Maintenance
TC22	Equipment	deleteEquipment	Delete equipment currently in use	Status = IN_USE	Deletion blocked
TC23	Video Calls	createVideoCall	Create video call with invalid customer	Invalid customer ID	Message: "Customer not found"
TC24	Video Calls	listVideoCalls	List video calls when empty	No video calls registered	Message: "No video calls scheduled"
TC25	Reminders	addManualEventReminder	Add manual event reminder	Valid customer and event	Reminder added successfully
TC26	Customer	findCustomerById	View full customer details	Full details of the client and the event assigned to this	Customer data is displayed
TC27	Photographers	deletePhotographer	Delete inexistent photographer	Inexistent photographer ID	Photographer not found or could not be removed.
TC28	Calendar	addManualEventReminder	Inexistent eventID	Inexistent eventID	Customer not found.
TC29	Calendar	addManualEventReminder	Add Manual Reminder to an Event	Invalid customerID with letter and symbols	Invalid entry. Please enter a whole number.

TC30	Calender	addManualEventRe minder	Add Manual Reminder to an Event	Event ID assigned to another customer	Error: Event with ID not found for this client.
TC31	Calender	viewSpecificEventR eminders	View Reminders for a Specific Event	Invalid customerID with letter and symbols	Invalid entry. Please enter a whole number.
TC32	Calender	viewSpecificEventR eminders	View Reminders for a Specific Event	Inexistent customerID	Customer not found
TC33	Calender	viewSpecificEventR eminders	View Reminders for a Specific Event	Event ID assigned to another customer	Error: Event with ID not found for this client.
TC34	VideoCall	createVideoCall	Schedule a new video call	Invalid customerID using letters or symbols	Invalid entry. Please enter a whole number.
TC35	VideoCall	createVideoCall	Schedule a new video call	CustomerID with negative numbers	Customer not found
TC36	VideoCall	createVideoCall	Schedule a new video call	Event ID assigned to another customer	Error: Referenced event (ID:) does not exist or does not belong to the client
TC37	VideoCall	createVideoCall	Schedule a new video call	Entry from platforms where the call is made (zoom, meet, teams) adding lowercase or uppercase letters	Video call successfully scheduled!
TC38	VideoCall	createVideoCall	Schedule a new video call	Entry from platforms where the call is made (zoom, meet, teams) adding	Error scheduling video call. Please verify the details.

				symbols and numbers	
TC39	VideoCall	createVideoCall	Schedule a new video call	Invalid date entry with letters and symbols	Format error: The date of the video call or event is invalid (it must be yyyy-MM-dd)
TC40	VideoCall	createVideoCall	Schedule a new video call	Date after the event	Validation Error: The video call must be before the event date
TC41	VideoCall	createVideoCall	Schedule a new video call	Valid Client ID, event ID, and Date	Video call successfully scheduled!
TC42	Bills	findBillById	Search invoice by ID	Bill ID with letters and symbols	Invalid entry. Please enter a whole number.
TC43	Bills	viewBillDetails	View invoice details	Invalid bill ID with letters and symbols	Invalid entry. Please enter a whole number.
TC44	Equipment	deleteEquipment	Delete equipment in maintenance	ID of a device that is undergoing maintenance	Error: The device is undergoing maintenance. It cannot be deleted. Mark the device as 'Available' before deleting it.
TC45	Equipment	deleteEquipment	Delete equipment available	ID of a piece of equipment available	equipment successfully removed
TC46	Equipment	updateEquipmentStatus	Change the status of a piece of equipment from maintenance to available	ID of a device that is undergoing maintenance Option 1 (Available)	Status updated to: Available

TC47	Equipment	updateEquipmentStatus	Change the status of a piece of equipment from available to in use	ID of a device that is undergoing available Option 2 (In use)	Status updated to: In Use
TC48	Equipment	updateEquipmentStatus	Change the equipment status from maintenance to in use	ID of a device that is undergoing in maintenance Option 3 (In use)	Status updated to: In Use
TC49	Equipment	updateEquipmentStatus	Update equipment status	non-existent equipment ID	Equipment not found.
TC50	Equipment	listAllEquipment	List all equipment	There is no registered equipment yet	There is no equipment listed in the inventory.
TC51	Photographer	getId	Returns the photographer's ID.	Valid id, name, event, equipment string	Photographer ID.
TC52	Photographer	setAttending	Updates attendance state.	attending = true/false.	Attendance updated.
TC53	Photographer	addEquipment	Adds a piece of equipment to the list.	Non-empty string.	Equipment added to list
TC54	Photographer	removeEquipment	Removes equipment from the list.	Equipment name contained in list.	Item removed
TC55	Photographer	confirmAttendance	Confirms attendance.	Boolean flag.	Attendance updated.
TC56	Photographer	save	Saves photographer instance to static list if ID not already registered.	Photographer object; ID must be unique.	true if saved, false if duplicate ID.

TC57	Photographer	findByld	Searches for a photographer by ID	Existing or non-existing ID.	Photographer object or null.
TC58	Month	addEvent	Adds an event to the month if its date belongs to this month and is not duplicated.	Valid event matching month.	true if added, false otherwise.
TC59	Month	addVideoCall(Video Call videoCall)	Adds a video call if it belongs to the month and is not duplicated.	Valid VideoCall in same month.	true if added.
TC60	Month	loadAllFromSystem	Loads events and video calls from system	Uses Customer	Month populated with activities.
TC61	Month	loadVideoCallsFrom System	Loads all video calls belonging to this month.	Uses VideoCall.getAllV ideoCalls	Video calls list updated.
TC62	Month	isEventInMonth	Checks if event date belongs to this month.	Event with parseable date.	true if same year + month.
TC63	Month	isVideoCallInMonth	Checks if a video call belongs to this month.	VideoCall with valid date.	true if added.
TC64	Month	getEventsByType	Filters events by event type.	Type code	Filtered list
TC65	Month	getVideoCallsByCus tomer	Filters video calls by customer ID.	Customer ID.	List of video calls for that customer.
TC66	Month	getAllMonthsWithAc tivities	Generates a list of all months that contain events or video calls registered.	Year, month	List of Month objects with activities.
TC67	Month	findCustomerByEve nt	Finds the customer who owns the given event.	Event object.	Matching customer or null.

TC68	Month	getVideoCallsByDay	Returns video calls for a specific day.	Day (1–31).	List of video calls.
TC69	VideoCall	VideoCall	Empty constructor used for JSON deserialization.	No input.	Empty object (fields to be filled).
TC70	VideoCall	VideoCall	Creates a video call with auto-incremented ID.	Valid customerId, eventId, date string, medium.	New video call instance with unique ID.
TC71	VideoCall	save	Validates references, validates dates, assigns ID if needed, and stores video call in JSON.	Existing customer, event belonging to that customer, date format = yyyy-MM-dd, call date < event date.	Video call saved and written to JSON (true), or validation error (false).
TC72	VideoCall	loadAllFromJson	Loads all video calls from JSON file.	File exists or not.	List of VideoCall objects (empty if file missing).
TC73	VideoCall	saveAllToJson	Saves all video calls to JSON.	List of video calls in memory.	File updated, returns true/false.
TC74	VideoCall	findById	Finds a video call by its ID.	Existing or non-existing ID.	Matching VideoCall or null.
TC75	VideoCall	findByCustomer	Returns video calls linked to a specific customer.	customerId.	List of matching video calls.
TC76	VideoCall	calculateNextId	Determines next available auto-increment ID	Internal list of calls.	Max ID + 1 or 1 if empty.
TC77	VideoCall	updateNextId	Updates nextCallId using calculateNextId.	Internal list	nextCallId recalculated.

TC78	VideoCall	getCallInfo	Returns formatted short information for reports.	Existing or non-existing	String: "ID
TC79	VideoCall	toString	Detailed string representation including customer name	No input.	description.
TC80	Bill	confirmPayment	Marks the bill as paid and saves it.	All stored values provided.	Updated and persisted payment status.
TC81	Bill	calculateAmount	Validates customer/event, assigns ID if needed, and saves to JSON.	Existing customer and event.	true if saved, false if validation fails.
TC82	Bill	delete	Removes a bill and updates the next ID.	Existing billId.	true if removed and persisted.
TC83	Bill	findBillById	Searches a bill by ID.	Existing or non-existing billId.	Bill object or null.
TC84	Bill	findBillsByCustomer	Retrieves all bills belonging to a customer.	customerId.	List of bills.
TC85	Bill	reloadFromJson	Reloads bills from JSON.	Existing JSON file	Updated list and nextBillId recalculated.
TC86	Bill	createbill	Create bill with invalid customer ID (letters/symbols)	customerId = abc	Invalid entry. Please enter a whole number.
TC87	Bill	Litsallbill	Show list of all bills	Bills.json contains one or more bills	The system prints each bill
TC88	Bill	markBillAsPaid	Mark an existing bill as paid	Valid bill ID of a bill currently in pending status	Bill status updated to paid and saved successfully

TC89	Bill	markBillAsPending	Change the status of an existing bill to PENDING	Valid bill ID with current status paid	Bill status updated to pending and saved successfully
TC90	Reports	GenerateGeneralSystemReport	Generate the general system report when the system contains data	Customers, events, bills, photographers, and equipment exist in their JSON files	Report displays correct totals for: customers, events, bills, photographers, and equipment
TC91	Reports	findPendingBills	Display all pending bills when at least one bill is pending	System has bills with status pending	System lists all pending bills and shows the total pending amount
TC92	Reports	findPaidBills	Display all paid bills when at least one bill is paid	System contains bills with status paid	System lists all paid bills and shows total paid amount
TC93	Photographers	listPhotographers	List all photographers when the system has one or more registered	photographers.js on contains at least 1 photographer	System prints each photographer's details
TC94	Customer	updateCustomer	Update all customer fields successfully	Valid customer ID; user enters new name, phone, email, and address	Customer data is updated and saved correctly
TC95	Customer	viewCustomerDetails	View full details of a valid customer	Existing customer ID	System displays full customer information, including events, bills, and reminders
TC96	Bill	createBill	Customer exists but has no events	Customer with empty events list	Customer has no registered events.
TC97	Bill	listAllBills	List bills when none exist	bills.json empty	No bills registered.

TC98	Reports	generalSystemReport	Generate system report when all modules are empty	No customers, events, bills, etc.	System displays "No data available" messages cleanly
TC99	Reports	pendingBillsReport	No pending bills	All bills are paid or none exist	No pending bills found
TC100	Reports	paidBillsReport	No paid bills	No bills with paid status	No paid bills found
