

Introduction to Unit test

A bug can find it with a debugging
cause problems (running bad), rewrites, intermedos.
With a huge and difficult in sometime we can redo the code

Hopper → Lady that found a
bug in a old US Army's
computer in 1947

Quality Management

Test Plan

usos es → What to test?
What techniques to use?
How will the cases be selected?
When does testing start? At beginning
When will it finish? Maybe never finish
Who will do the work?
How will the testing work be managed?
How will testing be coordinated with other development activities?
Emergency

Test (types of testing)

- By scope (the entire system, a subsystem, a module, etc.)
- By technique (Bit test, input-validation testing, logic-based testing, etc.)
- By source of test data (Source code, designs, specifications, random, custom, requirements)

By Scope

- Testing in the Small - Tests de código (small modules, classes, data type)
- Testing in the Large - Test el programa

TDD (Test Driven Development) Primero hace las pruebas y luego ~~escribe~~ el código

Pases errores (que se haya completado/corrido el código y que el usuario piense que está bien)

Las Unit Test → verificación

History of Computers

16th - Abaco
17th - Pascal
17th - Leibniz
1801 - Jacques → First Computer

Generation I (1946 - 1958) Mechanical

Vacuum Tubes on how Storage

Primera interfaz gráfica Xerox

First

Ada Byron - World's First Programmer

1880 census USA took 7 years

1900 Hollerith's Tabulating Machine (IBM born)

KISS - Keep the simple stupid/simple (no más de lo que le pidiere)

Use User Xerox research

Complexity

Minimizar lo complejo accidental

1st Law A computer shall not harm your work or, through action, delay to complete work (Una computadora no debe dañar el trabajo o retrasar la productividad)

2nd Law A computer shall not waste your time or require you to do more work than is strictly necessary (Una computadora no debe hacerle perder tiempo o exigirle)

3rd Law An interface is humane if it is responsive to human needs and considers of human frailties (Considera las debilidades humanas)

4th Law The user shall set the pace of interaction (El usuario debe ir a su propio ritmo)

Cognitivo y Llamada de Atención

Todo es un algo

1910 Xerox (GUI)

Windows 95 primer sistema operativo de Microsoft

Human Computer Interaction (HCI)

Human brain

- Memory (to store information)
- Perception (sensing)
- Cognition (thinking)
- Motor (for carrying out response)

se puede usar de 5 a 1 cosas en una interfaz
