OOP - 28434

Professor: Edison Lascano

By: Super The other system is already a real sample filter
to change

Number of test data

100%

Test data is important → Points to go for problem → large
language

(1) words as a whole ones

KISS: Keep it simple stupid

What is it?

Should keep the test up the problem?

What is the design rule? Intuitive design should keep it?

Is it correct? What is the test data? Is it good or bad?

1. Can a computer still not test your work is through testing allow
you work to use the data

2. Can a computer still not make you the correct solution more
with the data in the machine

3. Can the data be used to know if it is correct to the test and results
of the filter

4. Can the test still not be the point of solution
