

Navigation 2.07.06

Signpost are features that help users figure out their immediate surroundings

Help users stay found

Simple common signpost include: window title, logos, color schemes, hy lines, tabs, selection indications

"You are here" patterns

- Sequence Map
- Bread crumbs
- Annotated Scrollbar
- Color - Coded Sections

Way Finding is what people do as they find their way towards their goals

Way Finding and the structure of a system are directly dependant on each other

Actions and Commands 2.07.09

• User have learn basic GUI conventions

Action/Command
Mechanisms

- Action available
- Label them well
- Make them easy to find
- Support sequences of actions
- Support abstraction and repetition

Visible - buttons, menu bars, pop-menus, drop-down menu buttons, toolbars, links, action panels

Invisible - Single click, Double clicking, Keyboard action, drag and drop, typed commands

Basic Guidelines

- Follow conventions whenever possible
- Use pseudo 3D shading and drop shadows
- When the mouse pointer hovers over items that can be clicked or dragged, turn the pointer into something different
- Use tooltips to tell user what the objects under the mouse pointer do
